

Project Context

- Stack: Next.js (App Router), Vercel, GitHub, Tailwind CSS.
- Language: TypeScript (preferred) or JavaScript.

Rules for AI

1. Deployment: Always assume Vercel. If I ask about config, check `next.config.js` or `vercel.json`.
2. Package Manager: Use `npm` (based on your earlier choice).
3. Routing: We use Next.js App Router (folders inside `app/`).
4. SEO: When moving pages, always suggest 301 redirects to preserve SEO.
5. Code Style: Keep components small, use functional components, and use Tailwind for styling.
